</tbody>
</table>

**Notes:**
1) Thread must be embedded in a rafter or other structural roof member.
2) See IBC for required edge distances.

**Important:** To maintain waterproofing of substrate it is important to make sure the aluminum primary flashing is properly placed over the QBase and under the course of paper above. If the paper above does not reach, due to layout, place an additional piece of roofing paper over the primary flashing and under the next course of paper above. (See instructions on reverse)
QBase Standard Flat Tile Mounting Instructions

**Warning:** Quick Mount PV products are NOT designed for and should NOT be used to anchor fall protection equipment.

**Installation Tools Required:** tape measure, drill with 7/32" bit, drill or impact gun with 1/2" deep socket, caulk gun and sealant compatible with roofing material, whisk broom, roofing bar, angle grinder with a diamond blade

**NOTE:** The TRI/FRSA Florida guidelines indicate the sub-flashing being flashed using the three-course method on ALL FOUR SIDES. Alternative flashing methods may be approved by the AHJ at their discretion.

1. Remove tile at selected location of mount.
2. Locate and mark center of rafter.
3. Use a straight edge and measure up 6 5/8" from bottom of tiles to center of the mount over the center of rafter.
4. Align QBase over rafter center and drill two 3/8" pilot holes. Place grade-8 machine bolt under QBase in hex slot, threads pointing up. Lag QBase into rafter on marks.
5. Carefully clean the building paper then install sub-flashing. Waterproof at underlayment level according to roofing manufacturer instructions and Tile Roofing Institute Guidelines.
6. Cut a hole in the tile removed, with room to get the post through. Replace tile in position. Insert post and tighten into place. Install the 18" x 18" flashing and apply sealant around the opening.
7. Apply sealant where post and flashing meet, and install counter flashing collar. (Be sure to seal off the post from weather exposure with the sealing washer, in the interim before racks are installed.)

**Caution:** Prior to installation, check that proper screw embedment will be achieved for the necessary site load and roofing configurations.
